

Am I ready for MATH240: Precalculus?

If your schedule places you in [MATH240: Precalculus](#) but you have not covered trigonometry in a course (high school or college), we recommend you consider taking [MATH112: Trigonometry](#) prior to taking [MATH240](#). Trigonometry is part of the foundation of calculus and is necessary to be successful in calculus.

If you want to adjust your schedule to taking [MATH112](#), please email adeleo@latech.edu with your name, campus wide ID (CWID), and informing us of your requested change.

[MATH240: Precalculus](#) is a co-requisite with [ENGR120: Engineering Problem Solving I](#), the first engineering course. If you choose to take [MATH112](#), you will not be able to take [ENGR120](#) until you pass [MATH112](#) with a C or higher.
